Hydrogen peroxide is allowed as long term healthcare in livestock drinking water when intended for:

(a) preventative healthcare (such as mastitis prevention)
(b) sanitation of water lines, tanks, etc
(c) health benefit to the animals consuming the water.

Records are required:

(a) bacterial water tests before use
(b) date hydrogen peroxide is added to water system
(c) daily amount of hydrogen peroxide added
(d) method of injection into water system
(e) bacterial water tests after four weeks use to justify continuing approval

Items (a) through (e) must be submitted when use commences.
